

### Product features

The RX1 **SPACER** is an optional extra, providing a low profile mounting base to both the RX1 and RX1K readers.

The unit replaces the standard backplate to the reader, offering an alternative method of mounting the module, especially when fitting security projects to existing architecture and using 13mm square conduit cable trunking. The spacer also allows a convenient method of fixing the access control reader to a desktop, or most other plain surface finishes, and gives a greater stand-off to the reader module.

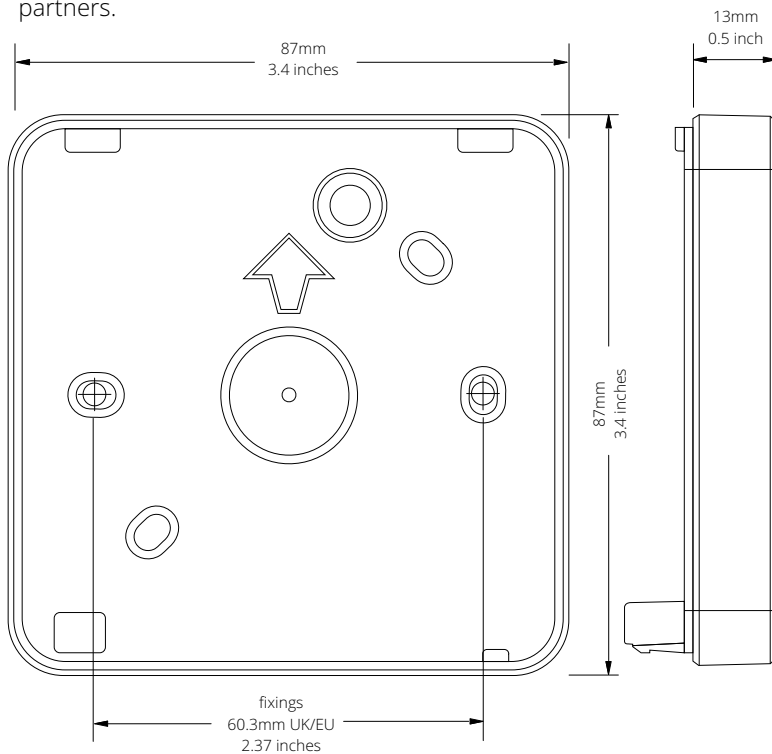

### Interfacing

The **SPACER** provides several screw hole fixing points with defined cable access to the reader, and easier positioning of wiring to the reader's connection terminal.

Made of tough ABS the **SPACER** provides a firm and solid backing to the reader, and gives a professional look to the finished product.

### Quality design

Third Millennium has more than 20 years of award-winning experience in the design and manufacture of RFID technology, and the delivery of world class, state-of-the-art access control projects to our many global partners.

# RX1 SPACER

### Key Features

- UK design and manufacture
- Black matt finish
- Tough ABS
- Slim profile

*RX1K fixed to SPACER*
