

### Product features

The RX switch is designed to work seamlessly with the RX series of advanced access control readers, and will separate multiple card technologies into individual data feeds for independent access control systems within a multi-tenanted environment.

Usually RX series readers and RX switches are installed at the building turnstiles. The various tenant card technologies are filtered and then sent to the corresponding tenant access control system.

**Please be aware the tenant is responsible for managing who may enter the building on their behalf.**
