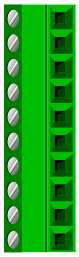
Generally the **RX series of readers** are wired and connected with pin-outs using a simple screw terminal connection block, making installation quick and easy. No special tools are required, other than a 2.5mm flat-head screwdriver. To avoid damaging the terminal block, do not use a screwdriver with a larger head.

Depending on the model of reader, the wiring pin-outs will usually follow one of 3 connection variants. The specification details on the DATASHEET to each reader will show the correct screw terminal connection pin-outs as referenced below.

SCREW TERMINAL CONNECTION

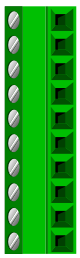
A



Pin out	Condition	Details
1	+Vdc	Supply voltage (+5Vdc to +16Vdc)
2	DATA1/CLK	Wiegand or Clock & Data output
3	DATA0/DAT	Wiegand or Clock & Data output
4	GREEN	Green LED control input
5	RED	Red LED control input
6	Buzzer	Buzzer control input
7	TMPR/CP	Tamper or Card Present output
8	0V	Supply voltage ground
9	TTL TX	TTL transmit line
10	TTL RX	TTL receive line

SCREW TERMINAL CONNECTION

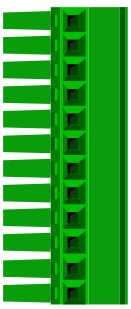
B



Pin out	Condition	Details
1	0V	Supply voltage ground
2	+Vdc	Supply voltage (+10Vdc to +16Vdc)
3	DATA1/CLK	Wiegand or Clock & Data output
4	DATA0/DAT	Wiegand or Clock & Data output
5	GREEN	Green LED control input
6	RED	Red LED control input
7	Buzzer	Buzzer control input
8	TMPR/CP	Tamper or Card Present output
9	RS485 -	RS485 Bus
10	RS485 +	RS485 Bus

PLUG TERMINAL CONNECTION

C



Pin out	Condition	Details
A	+5V	Power input. Connect only 5V or 12V power.
B	BEEP	Active Low.
C	DATA HOLD	Holds card data only - Active Low.
D	TAMPER	Normally closed to 0V - open on tamper.
E	0V	Power.
F	0V	Power.
G	RED LED	Active Low.
H	GREEN LED	Active Low.
I	+12V	Power Input. Always use 12V for RXSK60.
J	Wiegand Data 1	Open Collector output.
K	Wiegand Data 1	Open Collector output.
L	TAMPER	Normally open - connects to 0V on tamper.
